1. The following is an examiner's statement of reasons for allowance: The prior art fails to teach or suggest the invention as claimed. Note that claims 1 and 19 require dispensing to a spinning disk as a function of a triggering mark passing a triggering position, whereas Hubbard teaches dispensing to a stationary disk when a triggering mark (e.g., hole) is aligned with a triggering position (detector) (cols. 13-14), not passing it. For clarity of the record, the examiner notes that Zaffaroni is not limited to the disk being stationary during deposition ("In some embodiments, the disk is moving continuously during the deposition step." Col. 25, lines 28-30), but does not teach the external trigger position or passage of the triggering mark as the basis for deposition.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
